I am pleased to introduce the Annual Report for the Academic Year 2022–23 of the Turin School of Development (TSD).

The Turin School of Development continues to deliver its high quality teaching and education to participants coming from all over the world, securing a positive outcome.

We manage to be adaptable, quick-thinking and creative, addressing challenges and new opportunities.

This thanks to the dedication, professionalism and resilience shown by Centre’s colleagues, academics, professionals and UN experts composing the TSD faculty. Our high education offer has become more sustainable, innovative and technologically advanced.

The School is fully embedded into the training offer of the International Training Centre of the ILO and for each Master Programme the comparative advantage of the Centre as a global knowledge hub, combined with regional and national expertise, is further enhanced.

The TSD plays a central role in advancing social justice in line with the most recent programmatic policies of the ILO and the UN system. The School will continue to provide education and learning in the major areas of human rights, equal access to opportunities, fair distribution and just transitions.

We strive to assist Masters’ participants to become better acquainted and more influential in policy debates on economic and social issues such as sustainable development, job-rich growth, income inequalities, fair trade, social innovation, industrial and employment relations, technology and public policy, procurement and occupational safety and health.

The TSD will continue to provide a distinctive portfolio of executive postgraduate education in fields related to the purview of a number of UN specialized agencies and in close coordination with top universities across the world.
We believe that with the right tools, TSD participants can gain a complete awareness of managerial issues in the world of work. They broaden their horizons by sharing knowledge with peers of other Masters and this improves their ability to live and study in a multicultural and international environment.

Overall, more than 2900 alumni have successfully completed the graduation requirements of our Masters’ Programmes and are now holding significant professional positions in their own countries or abroad.

In this regard, I would like to mention the research cluster launched by the School in cooperation with the academic world, which is attracting more and more attention.

We can look ahead with confidence, anticipating exciting and successful future academic years.

Giuseppe Casale
Director, Turin School of Development
Director a.i., ITCILO
Foreword

The University of Turin, founded in the year 1404 as one of the main academic institutions in Europe, is one of the leading Italian public universities with an international reputation for high quality teaching, research and public engagement.

We offer to our 80,000 students a full-fledged set of innovative courses, a reliable partner for teaching and research programmes, aimed at providing our students with the academic competence required by the contemporary challenges of a global society.

The international dimension at UniTO concerns over 30 international double-degree programmes/joint degree programmes, Marco Polo and Turandot projects for Chinese students, 21 courses taught in English language, over 100 doctorates in joint-supervision and 2 international PhD courses, 1,300 agreements for Erasmus+ mobility for students, trainees, researchers, and teachers. Our 10 Masters’ Programmes offer students “out-of-the-box” educational experiences and aim to create impact on our global society through education and innovation. We provide our students with the multidisciplinary tools they need to become leaders in the field of international development.

The University of Turin is part of UNITA – Universitas Montium, the alliance of 17 universities that in 2019 took an important step toward the creation of a European university system. Since then, 24 new alliances have joined the original group in a wide process of enlargement based on economic, social and environmental sustainability.

Research is the top priority of the University of Turin – both fundamental and applied research that blends skills pertaining to:

- european, international and national research;
- cooperation and internationalization projects;
- students and scholars international mobility;
- cultural and technological transfer for innovation;
- relations with local business and with the territory.

The University of Turin is oriented to both relations with major international organizations and to collaboration with developing countries. In the former field, relations with United Nations Agencies have been stepped up, above all with those already operating in Turin: the International Training Centre of the ILO through the Turin School of Development, UNICRI and UNSSC.

For further information concerning the University of Turin please visit the official web page [http://en.unito.it/](http://en.unito.it/)

Stefano Geuna
Rector, University of Turin
Foreword

In an evolving global context disrupted by globalization, climate change, energy and digital transition, Politecnico di Torino is reaffirming its key role in teaching, research and technological transfer with the goal of becoming a driving force for societal sustainable development. Two examples of this new trajectory lie in the recent launch of new Master degrees such as Agri-tech Engineering or, since the academic year 2021/22, the creation of a permanent catalog of 24 multidisciplinary courses opened to the whole student community on the six Big Global Challenges of Climate, Digitalization, Energy, Mobility, Health, Humans and Technology.

Its portfolio of more than 30 Specializing and Executive Master programs has always been another key activity through which Politecnico has contributed to the creation of the specialized competencies and the curricula needed by professionals, firms, and institutions to cope with a fast-changing world while undertaking the goals of sustainable development.

In this direction, in the academic year 2022/23, Politecnico di Torino and the International Training Centre of the ILO, under the auspices of the Turin School of Development (TSD), have launched a first-level Specializing Master in “Technology and Public Policy”, to create specializing competencies on how public policies and complex decision-making processes involving public and private actors need to accompany technological innovation in various fields to shape a sustainable future from an economic, social and environmental perspective. With the same spirit and with a similar global faculty, the Politecnico, again in collaboration with ITCILO, is working on the development of a new Specializing Master program that places special emphasis on the role of new technologies in international development cooperation.

For further information concerning Politecnico di Torino and its directions to evolve the polytechnic culture, please visit the official web site https://www.polito.it/en

Guido Saracco
Rector, Politecnico di Torino
The goal of our Masters’ Programmes

Our objective is to provide multi-disciplinary postgraduate learning opportunities with targeted content and effective delivery modalities which are conducive to imparting the essential competencies needed for dealing with today’s social, economic and environmental priorities at national and global levels. The learning offers of the Turin School of Development are not intended to be in direct competition with similar programmes offered by universities; they are selected and designed with a perspective of “differentiation” through a combination of features such as:

- full involvement of specialized UN agencies and distinguished professional bodies in programme design, delivery and supervision;
- intensive delivery that meets the learning requirements of a European Master. This is possible through an optimal combination of distance learning with face-to-face interaction, together with applied project development and research work, in such a way as to minimize participants’ absence from work duties back home;
- multi-disciplinary coverage of the full range of technical competencies and professional skills for specific jobs in today’s knowledge economy;
- close coaching and learning support by dedicated tutors throughout the whole learning cycle.

Andreas Klemmer
Assistant Director, Turin School of Development
Director of Training, ITCILO
The Masters are intended for:

- university graduates from developing and developed countries who intend to work in the fields of development, governance and international trade;
- professionals in the public and private sectors, UN, EU, and multilateral agencies, foundations and NGOs.

Requirements:

- successful completion of a first level university degree (of at least three years’ duration);
- fluency in English (evidence of English language fluency required).

Career opportunities:

TSD graduates are well prepared to meet the entry profile requirements of international companies, governments, UN agencies and the NGO sector. They are ready to assume responsible jobs of the 21st century in the fields of development and international trade. Participants are exposed to a mix of academic study and professional practice that are the “best fit” for diverse cultural backgrounds.

Fellowships:

A limited number of partial fellowships may become available through contributions by public and private sponsors in Italy on a competitive basis. These partial fellowships are intended to supplement the financial capacity of participants from developing and transition countries who would otherwise not be able to pursue their studies without external financial support.

Faculty:

The faculty of the Turin School of Development is comprised of a mix of renowned university professors, selected from a network of premium partner universities across the globe, along with senior practitioners from the UN System and key professional bodies. The faculty includes 283 leading professors, professionals and UN experts from over 80 different institutions. In addition, participants’ learning is closely supported by dedicated tutors.

Master in International Trade Law

The Master aims to provide an in-depth understanding of the main legal issues concerning international commercial contracts, from contract drafting to dispute resolution, with emphasis on recent developments and the increasing complexity of contract law, including the impact of new technologies and the role of compliance for MNEs.

Moreover, it covers the key international institutional and legal frameworks for international trade and investment, and incorporates a dedicated module on international dispute settlement, international commercial arbitration and transnational domestic litigation.

This Master has been designed for recent university graduates who intend to work in the field of international trade law, in law firms, corporate legal departments, governments, international organizations, and academic or research institutions. Law consultants, practitioners, and young managers wishing to expand their knowledge in the field of international trade law had also taken part to the courses.

As we look back on the past year’s milestones, we are thrilled to report that the 2022-2023 edition of the Master has exceeded our expectations. Our traditional learning model of intensive lectures at the ITCILO Campus in Turin continues to be a cornerstone of our programme, but we have also added several new thematic areas, including AI&LAW, supply and value chain challenges, electronic commerce, and other related topics.

These new thematic areas have generated significant interest among our participants, with the use of new technologies in international dispute resolution systems being a particularly hot topic. We are delighted to see our participants engaging with these new areas and applying their newfound knowledge to real-world scenarios.

Our Master Programme remains committed to providing a diversity-oriented approach and a global perspective, and we are honoured to have had the opportunity to engage with a diverse group of participants from around the world. As we move forward, we will continue to provide our participants with a comprehensive understanding of private law, public law, and international dispute resolution, as well as encouraging them to think critically and creatively about the challenges and opportunities presented by the rapidly evolving global landscape.

We are excited to see what the future holds for the Master Programme and look forward to continuing to provide an exceptional learning experience for our participants.

Prof. Franz Werro
Professor of European Private Law and Comparative Law, University of Fribourg and Georgetown University Law Centre
Master in Management of Development

The Master provides an opportunity to explore the theoretical, conceptual and operational frameworks for managing development from a multi-disciplinary perspective.

It integrates socio-economic policies with an in-depth understanding of the legal, institutional, local and managerial contexts for the effective planning and implementation of development programmes and projects. It thoroughly examines policies and strategies that may contribute to sustainable transformations in terms of cultural, political, social, economic and environmental changes. The content and learning delivery methods are designed to provide the participants with the full spectrum of competencies needed to deal with the challenges currently faced by development professionals in their pursuit of social and economic progress, while preserving the natural environment for future generations.

The curriculum of the 2022-2023 edition of the Master in Management of Development - jointly offered by the ITCILO and the University of Turin under the aegis of the TSD - was revised according to the most topical trends in the development sector, with an increasing emphasis on social and environmental sustainability issues. The number of participants is in line with the previous year, with a total of 16 participants from 14 countries. The Master maintained a hybrid structure with two distance learning phases (an asynchronous phase of nineteen weeks and a synchronous phase of three weeks), and a face-to-face phase of eleven weeks.

Following an introductory part mainly aimed at explaining the topic of development and sustainability and focusing on its main aspects, during the distance phase participants learned the main development methods and techniques and were introduced to Project Cycle Management and Project Design. After the uncertainties posed by the COVID-19 pandemic, all participants managed to attend the face-to-face component in person here in Turin. The in-presence phase maintained the curriculum of previous years and combined it with a workshop phase on individual projects. Once again, group activities were planned in order to make lectures highly interactive and lively.

In fact, the face-to-face component ended with the elaboration of an individually developed project concerning the different challenges in the development world, resulting from the combination of the interdisciplinary nature of the topics covered during this phase and the project workshops. The Master ends with a working paper, focused on theoretical reflections or assessing a specific case study.

Public and private-sector organizations throughout the world are increasingly concerned with improving Occupational Safety and Health (OSH). In both developed and developing countries, the rapid pace of technological change, combined with the persistence of unsafe or environmentally hazardous working conditions, has served to focus attention on the need to create safe, healthy working environments and promote a new safety culture in the workplace. Organizations are increasingly seeking OSH professionals who can catalyse these processes, and it is not always easy to find professionals with the right skills. Becoming a safety and health professional requires multidisciplinary training. The OSH profession calls for a broad-based educational background, including specialized knowledge of the physical sciences (medicine, physics, chemistry and engineering) and the social sciences (behaviour, motivation and communication), together with an understanding of the principles and concepts of management.

The Master combines the advantages of the academic knowledge and the international training experience of the organizing partners in the field of OSH.

The residential part of the 2022-2023 edition of the Master Programme in Occupational Safety and Health was delivered between January and the end of March 2023. Study visits to different new companies have been incorporated and a process of renovation of some of the resource persons in the residential part of the programme is being implemented.

This programme is specifically designed for hygienists, physicians, chemists, engineers, inspectors, practitioners and officers, with a university degree but without a previous specialization in OSH, who are working, or wish to work, as OSH specialists.

Upon completing the programme, students will have developed the required competences for effectively managing safety and health in the workplace.

The Master in Public Procurement Management for Sustainable Development explores the legislative, regulatory, organizational and managerial foundations of a modern public procurement system. It aims to help make up the current deficit in qualified human resources and enable procurement professionals to cope with the challenges of regulating, executing and monitoring public procurement in an economic and socially responsive manner while mitigating adverse environmental impact.

Strategies and instruments for embedding social, environmental and human rights at the relevant steps of the procurement process/supply chain are few of the key topics of the Master, together with the promotion of corporate social responsibility through public procurement.

Learning about the execution of the procurement process for goods, works and services (including innovative contracting modalities like public-private partnerships and e-procurement) is at the core of the Master’s outcome whose participants are procurement trainers, procurement advisors and practitioners, local government bodies and public expenditure supervisory bodies as well as recent university graduates who intend to work in the field of public procurement or public expenditure management.

Striving to meet the changes and demands brought from the Covid-19 pandemic situation, the Master curricula building on the 2022 – 2023 edition was newly enhanced with lectures and case studies related to designing and conducting procurement operations in emergency and fragile situations: agile and smart design are the new skills and competences the Programme is focusing on. In addition, logistics and supply chain issues related to more effective implementation with a focus on sustainability and inclusiveness. Red flags in performance-based Auditing procurement under emergency, the efficacy and Value for money of procurement, the need for a better and strategic planning in public procurement, and the way forward in renegotiations in public private partnerships (PPP). Since 2021, the Master Programme introduced weekly webinars with expert lecturers in the Distance Learning phase, in addition to the interactive techniques and tutor based briefings, which were already in place. This approach has been highly valued by the participants.

The Master in Industrial and Employment Relations is designed to provide a wide spectrum of knowledge and skills for those with professional interests in industrial and employment relations. In addition, participants will be exposed to international and comparative industrial and employment relations systems with a view to better understanding the implications for current industrial relations systems and practices.

In a fast-changing environment (political, economic, social, cultural and technological) in which governments, workers’ organizations and employers’ and business membership organizations are continuously required to adapt their strategies, a better understanding of contemporary trends and challenges in industrial and employment relations is a compelling need.

The Master is also an opportunity to share a learning experience with practitioners and participants from all the regions of the world. The Master in Industrial and Employment Relations aims to develop specialized, multidisciplinary knowledge in the field of industrial and employment relations from a comparative viewpoint. It will provide participants with a deep theoretical and practical understanding of industrial and employment relations systems around the world by looking into recent changes and trends.

As a positive outcome of the post-pandemic era, the Master in Industrial and Employment Relations transitioned to an online platform, paving the way for broader global expert involvement and a higher level of proficiency among resource individuals. Notably, the shift to online education has markedly enhanced student engagement and participation, fostering a vibrant and interactive academic community. It has also extended a unique opportunity for working professionals worldwide to take part in the Master Programme, facilitating their quest for advanced knowledge in the industrial relations field.

Master in Social Innovation for Sustainable Development

Social innovators and entrepreneurs are expected to play a crucial role in the implementation of the 2030 SDGs in the medium term. Through the development of critical thinking on the global trends affecting our society and the provision of the key tools and techniques for anticipating change, participants explore the implications of different models for responding to complex situations in the various dimensions of sustainable development.

The Master is intended for officials and/or professionals working in the public and private sectors and for UN agencies, foundations and NGOs; recent university graduates from developing and developed countries; people working or interested in social innovation and social entrepreneurship and related research; members of cooperatives.

The 2022-2023 edition of the Master in Social Innovation for Sustainable Development was the third fourth edition of the Master. The Master has continued to grow, this year reaching 25 participants from all over the world, and has now established itself as a high-profile international training programme. It combined two distance learning modules (synchronous and a-synchronous participation) with a face-to-face in-presence component at the ITCILO campus, making the programme accessible and affordable for professionals and participants from all regions of the world. With a high-profile global faculty involving lecturers from international organisations such as UN agencies and others like the OECD, academics from leading universities and research institutes, and practitioners from the world of social economy, the Master’s Programme offered a unique theory-based and practice-oriented approach. In this edition, special attention was paid to project monitoring and evaluation practices, a key element in developing a social innovation project and achieving concrete structural change at the social level. Also this year, the Master ended with the development of an original project linked to a specific environmental or social challenge and subsequently testable at national or European level.

INDEX
Global trends show that technological innovation, digital transformation and the revolution in artificial intelligence are shaping unprecedented and challenging future scenarios. Public-policy and decision-making processes need to adapt their strategies to respond promptly and effectively to forthcoming challenges and shape a sustainable future from an economic, social and environmental perspective.

In order to face future challenges and benefit from the emerging opportunities posed by technological change, the Turin School of Development (TSD) has decided to launch a Master in Technology and Public Policy for the first time entirely in collaboration with the leading technical university, Politecnico di Torino. The ultimate goal is indeed to train future change agents capable not only of recognising the different trends of technological innovation but also of governing these challenges and opportunities through public policies.

The first edition of the Master started with 13 participants from all over the world and with a very heterogeneous background in development cooperation, public administration and international organizations in the fields of economic, technological, industrial and social policy, public affairs in technology companies and industrial and employment relations.

The programme combined two online modules (synchronous and asynchronous) and a face-to-face component at the ITCILO campus in Turin. The curriculum was developed following two trajectories, transversal skills modules to merge the technological approach with the socio-economic and political determinants and vertical skills modules to better understand new technologies and the interaction with them.

The Master ended with the development of an original written project related to a specific challenge and a policy intervention as final thesis. The project should be based on a given economic, social and ecological challenge and testable at the country or community level.
